Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-20 are rejected under 35 U.S.C. 102(b) as being anticipated by USP 6342578 see abstract, col. 4 lines 10 through col. 5, tables 1-4, cols. 11 lines 28-40, and claims 1-14.

USP 6342578 discloses a composition comprising: a copolyester of polyethylene terephthalate and a dicarboxylic acid or its ester equivalent, and not more than 100 microequivalents per gram of said copolyester of an anhydride selected from the class consisting of succinic, glutaric, benzoic, maleic and phthalic anhydride, said composition having a CEG content greater than about 25 microequivalents per gram and an IV greater than about 0.65. The reference also discloses a method of making a composition having reduced caustic stress cracking, comprising: reacting terephthalic acid or its ester equivalent and another dicarboxylic acid with ethylene glycol by esterification followed by polycondensation to make a polyethylene terephthalate copolyester; adding at the end of said polycondensation not more than 100 microequivalents per gram based on said copolyester of an anhydride selected from the class consisting of succinic, glutaric, maleic, benzoic, and phthalic anhydride, said

Art Unit: 1711

composition having a CEG content greater than about 25 microequivalents per gram.

Thus, the reference discloses a polymer resin prepared from the same components as claimed by applicants. Each of the limitations in the claims are clearly found throughout the reference and as cited specifically above; i.e col. 4 lines 10 through col. 5, tables 1-4, cols. 11 lines 28-40, and claims 1-14, as well as using the resin for making containers. Consequently, the claimed invention cannot be deemed as novel and accordingly is unpatentable.
